ABSTRACT

--The invention relates to a device for positioning an element with respect to at least two reference points (4a, 4c), in which said device acts upon a working point on the element to be positioned and comprises a positioning arm attached to a fixed hinging point with respect to said reference points (4a, 4c), comprising two mutually hinged parts (6a, 6b) allowing a movement of said element to each reference point (4a, 4c). The invention related further to a device for positioning at least one offset plate on a positioning table of a pre-press equipment, comprising means to move the offset plate in a plane parallel to the positioning table to at least one reference point (4a) on the positioning table, in which said means acts upon a working point situated in the supporting plane of the offset plate on the positioning table.
